Click the link above to launch this episode.

The Board of Directors of a national Health Care System is considering which electronic health record (EHR) system to use and how to implement the EHR in all of its facilities. As a Health Care IT consultant, the student will work with various team members at the corporate level to gather information and analyze the efficacy, safety/security/legal factors, cost effectiveness, and cost-benefit factors of two possible new systems to help them decide whether or not to implement one of them. The student will also recommend a high-level implementation plan that considers system cutover and change management.
