Introduction to Health Research Methods
A Practical Guide

Kathryn H. Jacobsen, MPH, PhD

Introduction to Health Research Methods demystifies the research process and empowers students to conduct their own original research projects. Using clear language and practical examples, the text offers five sections that describe the entire research process beginning with the identification of a research question and the selection of a study approach, proceeding through the collection and analysis of data and the preparation of a formal scientific report, and ending with academic and professional presentations and publishing. By breaking the research process down into manageable steps, Introduction to Health Research Methods communicates the excitement and importance of health research—and encourages readers to make their own contribution to improving the health of individuals and communities through research.

From the Preface
“This book is important and timely in light of health care reform in the United States and globally. Since ready access to health care and prevention are emphasized, greater care will be placed on educating patients; specifically, this means focusing on methods that will lead to improved patient understanding of diseases, increased adherence to medical regimens, and early recognition of problems by the patient.”
— Richard D. Muma, PhD, MPH, PA-C
Barbara Ann Lyons, MA, PA-C

“The health education topics presented in this text address the issues that impact health care delivery to promote good health. The text is easy to read and provides a through coverage of health education approaches. The techniques, tips and recommendations provided to increase patient interaction is relevant in patient centered care. Significant issues related to the changing diverse/ethnic patient population addresses cultural competent health care and strategies to work with patient with low health literacy. The author successfully writes for audiences of diverse backgrounds and experienced health care providers.”

Help students reinforce textbook learning and practice critical decision-making skills with these interactive, real-world scenarios within a simulated hospital setting.

This series of video vignettes takes students through scenarios during a “day in the life” of five different characters at a typical hospital. The student may choose to follow a senior resident, a charge nurse, a hospital receptionist, an environmental services staff person, or a nurse’s aide. As the character progresses through the scenario, the video pauses and the student is asked how the character should proceed. The video continues with different outcomes determined by the student choices. Topics covered include: communication, leadership, quality assurance, patient safety, and providing a patient-centered environment.
