

**Nancy Caroline's Emergency Care in the Streets, Sixth Edition**

**Hypothermia Algorithm Errata  
Page 35.18**

The Hypothermia Algorithm should read:

- Start CPR
  - Give 1 shock
  - Manual biphasic: device-specific (typically 120 to 200 J); if unknown, use 200 J AED
  - Monophasic: 350 J
  - Resume CPR immediately
  - Attempt, confirm, secure airway
  - Ventilate with warm, humid oxygen (42°C to 46°C [108°F to 115°F]) Establish IV access Infuse warm NS (43°C [109°F])

The listed under “What is core temperature?” (left) should read:

- Continue CPR
- Withhold IV medications
- Limit to one shock for VF/VT
- Transport to hospital
