Skill Drill 5-7 Performing One-Person Bag-mask Ventilation

Task: Perform one-person bag-mask ventilation.					
Performance Observations: The candidate shall be able to correctly perform one-person bag-mask ventilation.					
Candidate Directive: "Properly perform one-person bag-mask ventilation."					
No.	**Task Steps**	**First Test**		**Retest**	
		P	F	P	F
1.	Open the patient's airway with a head tilt–chin lift or a jaw-thrust maneuver as indicated. Suction as needed and insert an oropharyngeal airway.				
2.	Place the device on the patient's face. Make sure the top is over the bridge of the nose and the bottom is in the groove between the lower lip and the chin. Bring the lower jaw up to the mask with the last three fingers of your hand. Make sure you do not grab the fleshy part of the neck.				
3.	Squeeze the bag in a rhythmic manner that is not too forceful and only enough so that you see the patient's chest rise. Deliver ventilations to the adult patient at a rate of 10 to 12 breaths/min (about one breath every 5 to 6 seconds). Ventilate pediatric patients at a rate of 12 to 20 breaths/min (about one breath every 3 to 5 seconds).
